NMS Turnkey Digital Growth Programme

A selectable 3–12 month proposal for brand, commerce, marketing, automation and managed growth

Prepared for: Natural Medicinal Services (NMS)

Prepared by: JB³AI

Document preparation: JONATHAN BLACKBURN

Issue date: 16 August 2026

Currency: South African rand (ZAR)

Commercial basis: Prices exclude VAT unless stated otherwise

***Confidential proposal.** This document is intended for NMS and the appointed service provider. It is a commercial and implementation proposal, not a legal, tax, medical or regulatory opinion. Product classification, advertising claims and practitioner scope must be confirmed by qualified South African specialists before launch.*

Executive summary

NMS has an opportunity to build more than a website. The recommended programme creates a complete digital operating system: a credible brand, a mobile-first website and online store, compliant product and service copy, social channels, content production, search visibility, paid acquisition, a customer relationship management system, email and WhatsApp lifecycle communication, an AI-assisted chatbot with human handoff, analytics, security and continuous optimisation.

South Africa provides substantial digital reach. DataReportal estimated **51.7 million internet users**, equal to **79.6% of the population**, in October 2025. It also estimated 29.1 million social-media user identities, while individual platform planning figures included 29.1 million adult TikTok users potentially reachable by advertising, 8.60 million people potentially reachable on Instagram and 17.0 million registered LinkedIn members. These measures use different definitions and must not be added or treated as buyers. [1](#) South African online retail reached **R96 billion in 2024**, a 35% year-on-year increase and approximately 8% of retail; the same industry study forecast more than R130 billion in 2025. These are all-category market indicators, not NMS revenue projections. [2](#)

The broad wellness context is also large: the Global Wellness Institute estimated South Africa's 11-sector wellness economy at **US\$23.62 billion in 2023**. That figure includes categories such as beauty, nutrition, physical activity, tourism, real estate and public-health spending, so it is not a natural-medicinal-products market estimate. [3](#) The proposal therefore avoids top-down revenue promises. NMS revenue will be modelled from compliant, qualified traffic, delivered-order conversion, average order value, contribution margin, repeat purchase and operational capacity.

NMS may choose a programme between **R20,000 and R100,000 per month**, with a minimum three-month engagement and optional 6-, 9- or 12-month commitments. Longer commitments reduce the service-delivery component by 5%, 8% or 12% respectively; media, software and external costs are not discounted. The recommended starting point is the **Growth package for six months**, which creates enough capacity for the website and store, brand system, four-channel content programme, multi-campaign paid media, SEO, CRM automation, chatbot with human handoff, analytics and maintenance. Its discounted recurring value is **R48,375 per month excluding VAT**, or **R290,250 excluding VAT** over six months.

The commercial objective is not "more activity." It is to build a measurable system that acquires, converts and retains customers at sustainable contribution economics. The programme uses four decision horizons. The first 90 days establish the foundation and early unit economics. Months 4–6 optimise conversion and channel fit. Months 7–9 deepen automation, content and partnerships. Months 10–12 build retention, organic visibility, seasonality evidence and a repeatable annual growth plan.

1. NMS opportunity and commercial context

1.1 Why the market is ready

Digital adoption and online retail growth create a favourable environment for an NMS relaunch, but success will depend on trust, compliance and execution. The 2024 Online Retail in South Africa research found that only **18.6% of surveyed consumers regarded online shopping as safe and secure**. Retailer responses also identified declined cards and payment failures as material sources of checkout friction, while 73.9% emphasised customer service as important. [4](#) This makes transparent product information, secure payment, predictable fulfilment, accessible support and credible claims central conversion features—not administrative extras.

Google held 92.12% of measured South African search-engine page views in July 2026, making search a priority for high-intent discovery, although browser telemetry is not a measure of demand or purchasing intent. [5](#) Social platforms perform a different role. TikTok, Instagram and YouTube can create awareness and explain unfamiliar concepts; Facebook and Instagram can support community, retargeting and assisted conversion; WhatsApp can help answer pre-purchase questions and service existing customers; LinkedIn can support practitioner, retail, employer and strategic partnerships. Each channel will have a defined job rather than receiving duplicate content without purpose.

1.2 What the available market numbers do—and do not—mean

Indicator	Current evidence	Correct use in this proposal	What it must not imply
South African internet users	51.7 million; 79.6% penetration, October 2025 1	Indicates broad digital reach and supports a mobile-first approach	51.7 million prospects or customers
Social-media user identities	29.1 million, October 2025 1	Indicates that social platforms can support scalable education and discovery	Unique people, verified adults or purchase intent
South African online retail	R96 billion actual in 2024; 35% growth; 8% of retail 2	Demonstrates material e-commerce adoption	NMS total addressable market or forecast revenue
2025 online-retail outlook	More than R130 billion forecast 2	Directional evidence of channel expansion	Audited actual sales or an NMS category forecast
South African wellness economy	US\$23.62 billion in 2023 across 11 sectors 3	Macro context for wellness-related spending	Supplements, complementary medicine or online NMS revenue

NMS's real serviceable available market must be built from the products and services that can lawfully be offered, their approved claims, adult eligibility, delivery postcodes, price points, stock, practitioner capacity and channel eligibility. The serviceable obtainable market will then be forecast bottom-up from actual funnel data.

1.3 Strategic thesis

The programme is based on five connected ideas. First, NMS should lead with **trust and evidence**, because natural-medicinal products and services are high-consideration purchases. Second, the website and store should act as a conversion and service hub rather than a digital brochure. Third, paid media should validate profitable audiences and offers while owned search, email, WhatsApp and content build lower-dependency demand. Fourth, customer interactions should flow into one CRM so that leads, orders, conversations and follow-up are visible. Fifth, compliance must operate as a production workflow: every product page, advert, chatbot answer and influencer script should use an approved claims library.

2. Programme objectives and definition of "turnkey"

The programme's primary objective is to give NMS one accountable delivery partner for the connected work required to launch and grow its digital business. "Turnkey" means that strategy, design, build, integration, launch, reporting and maintenance are managed as one programme, while NMS retains ownership of its brand, accounts, data and approved assets.

Business objective	Turnkey outcome	Evidence of completion
Establish a credible identity	Logo, colour and typography system, brand guide and editable templates	Approved brand pack and source files
Explain NMS clearly	Messaging architecture, compliant value propositions and rewritten core copy	Approved claims-linked copy deck
Sell and service online	Mobile website, store or booking journey, secure payment, fulfilment information and support routes	Tested production site and transaction checklist
Build reachable audiences	Optimised social profiles, channel-specific content, SEO foundations and paid campaigns	Live channels, content calendar and campaign dashboard

Capture and nurture demand	CRM pipeline, lead forms, email flows, WhatsApp service and chatbot with escalation	Test leads and conversations visible in CRM
Measure commercial performance	Analytics, pixels/consent controls, order and lead tracking, contribution model and reporting	Reconciled monthly scorecard
Protect and improve the system	Hosting oversight, security, backups, updates, content changes and optimisation	Maintenance log, restore evidence and monthly improvement plan

The programme is designed to replace fragmented suppliers and disconnected tools with a managed operating rhythm. It does not remove NMS's responsibility for regulatory status, truthful product information, stock, fulfilment, practitioner decisions or final approvals.

3. The proposed turnkey solution

3.1 Strategy, positioning and go-to-market design

The engagement begins with discovery across NMS's products, services, audiences, commercial goals, regulatory status, inventory and operations. The delivery team will define priority customer groups, purchase barriers, channel roles, the offer hierarchy and the core measurement model. This produces a practical strategy rather than a static brand workshop: every audience, claim, content topic and channel will map to a conversion journey and measurable result.

The initial strategic outputs include the one-page business scorecard, customer and partner profiles, offer architecture, value proposition, messaging hierarchy, channel plan, launch priorities, 90-day backlog and decision log. The selected package determines the number and depth of audience segments and experiments.

3.2 Logo and brand identity

NMS will receive either a new logo system or a disciplined refinement of the existing identity, depending on discovery. The visual system will include primary and secondary logo applications, colour palette, typography, image direction, icon approach, accessibility considerations and practical rules for product imagery, packaging, social graphics, presentations and digital interfaces.

Current published South African vendor prices show that a small logo pack and a strategy-led identity are not equivalent. Basic logo and compact corporate-identity packages may begin in the low thousands of rand, while a fuller strategy-led identity starts materially higher. [6](#) The programme therefore scales identity depth by package: Foundation creates a credible usable system; Launch and Growth add a broader template library; Scale and Market Leader add campaign systems and governance for multiple contributors.

3.3 Copywriting and compliant messaging

The copy workstream rewrites the website, store, service pages, calls to action, frequently asked questions, emails, chatbot knowledge and campaign messages. Copy will be simple, specific and evidence-led. It will distinguish education from medical advice, avoid exaggerated certainty and use only claims approved for the exact product, formulation, dose and intended use.

Published South African copywriting ranges vary widely because commodity per-word writing is not comparable with research, interviews, conversion strategy and health-product review. Current local guides place researched articles, landing pages and specialist work well above commodity production. [7](#) NMS's programme therefore prices copy within the delivery scope and uses an external regulatory or medical reviewer when needed.

3.4 Mobile website and online store

The website will be designed around four tasks: understand, trust, buy or book, and obtain support. The core build includes responsive design, fast page templates, structured product or service information, search foundations, forms, analytics, consent controls, secure checkout or booking, fulfilment and returns information, CRM capture and chatbot integration.

The selected package determines product volume and complexity. Foundation supports a focused launch with up to 10 products or equivalent core offerings. Launch supports up to 25. Growth supports up to 50 and adds conversion landing pages. Scale can add bundles or subscriptions. Market Leader supports a custom commerce roadmap and ongoing conversion-rate optimisation. Current South African vendor pages show entry e-commerce builds beginning around the low tens of thousands of rand and rising substantially with catalogue size, custom checkout, subscriptions and integrations. [8](#) This is why custom ERP, point-of-sale or complex API work remains subject to technical discovery and change control.

3.5 Social media presence and content engine

The team will establish or optimise the social profiles that matter for NMS, including naming, biographies, link structure, imagery, permissions, security and measurement. The channel mix will be selected by audience and offer, not by a requirement to be everywhere on day one.

The content engine will produce a planned combination of educational posts, short-form video, product or service explainers, founder or practitioner perspectives, trust assets, frequently asked questions, customer stories where consented, behind-the-scenes quality proof and campaign creative. Social-media management prices in South Africa range from basic packages to premium programmes exceeding R25,000 per month before media, with original content and video adding cost. [9](#) NMS's package scope therefore specifies both channel count and production cadence.

3.6 Search engine optimisation

SEO begins with technical access, indexation, site architecture, keyword mapping, local visibility, metadata and content templates. Growth and higher packages add recurring expert-reviewed content, technical monitoring, internal linking, content clusters and authority development. NMS will not publish health content purely to chase search volume; topics must match lawful claims, customer needs and commercial priority.

Current South African SEO offers range from low-thousands retainers to R12,000–R25,000 or more per month depending on page volume, content, technical work and authority building. Results commonly require months rather than weeks, and rankings cannot be guaranteed. [10](#) This supports the programme's 6–12 month optimisation horizon.

3.7 Paid media and campaign management

Paid media will begin narrowly. High-intent search and a limited number of compliant Meta campaigns should establish message, audience and landing-page performance before broader scaling. TikTok, YouTube, LinkedIn, creators and partnerships will be introduced when the audience, content format, platform policy and economics justify them.

Every package displays a paid-media allowance. This is a planning amount, not agency revenue. Campaigns should run from NMS-owned advertising accounts, with payment directly controlled by NMS where possible. The team will manage targeting, budgets, creative, landing pages, quality assurance, tracking, testing and reporting. Media will not be scaled based only on platform

return on ad spend; fulfilled orders, contribution margin, new-customer economics and stock must also pass their gates.

3.8 CRM, email, WhatsApp and lifecycle automation

The CRM will become the source of truth for lead status and customer follow-up. The initial implementation includes pipeline stages, source capture, ownership, tasks and reporting. Depending on package, NMS will receive welcome, abandoned-checkout, post-purchase, replenishment, review, education, win-back or partner-nurture journeys.

WhatsApp should be used primarily for assisted conversion, service, order updates and consented retention. It should not become a database for indiscriminate bulk outreach. The selected tool stack will record consent status and suppression across email and messaging. More advanced CRM programmes in South Africa commonly separate implementation, licensing, migration, training and monthly optimisation. [11](#)

3.9 AI chatbot with human handoff

The chatbot will be designed as a controlled service assistant, not a medical practitioner. It may explain approved information, answer store and service questions, capture lead details, guide users to relevant pages and escalate to a human. It will not diagnose, prescribe, recommend outside the approved knowledge base or claim certainty about suitability.

The minimum useful handoff passes the conversation context, user contact information and reason for escalation to a human queue. Growth and higher packages include a stronger knowledge base, CRM capture, confidence thresholds, escalation triggers, analytics and monthly answer review. Published South African chatbot guidance distinguishes low-cost no-code setup from custom AI/CRM implementation and ongoing platform usage. [12](#) External conversation, model or WhatsApp charges remain pass-through costs.

3.10 Analytics, reporting and experimentation

Analytics will connect the customer journey from channel to landing page, lead, order or booking and follow-up. The implementation will use consent-aware analytics, campaign naming standards, verified events, order identifiers and monthly reconciliation to operational records. Platform-attributed sales will not be added together and called total revenue.

Reporting will distinguish reach, qualified traffic, leads, orders, contribution and retention. Growth and higher packages add funnel analysis, cohort views, creative testing and an experiments register. Google's documentation makes clear that attribution uses different models and conversion windows, and Google Ads conversions can be reported materially after the original click. [27](#) [28](#) The reporting process will therefore mark data maturity and avoid premature conclusions.

3.11 Maintenance, security and ongoing improvement

Maintenance is part of every programme because a launch without upkeep creates security, accuracy and conversion risk. The service includes hosting oversight, updates, backups, restore checks, uptime and form monitoring, access review, performance checks, minor content changes and dependency management at the level of the selected package.

Hosting is not the same as maintenance. Current South African guidance distinguishes low-cost hosting from the recurring work required to update, test, secure and support an active e-commerce website. [13](#) The programme prices this operating work into the monthly service component.

4. Selectable monthly packages

All packages are complete programmes at different levels of depth and velocity. Foundation does not promise every advanced feature at R20,000; it creates a credible core. Higher packages add production, channel breadth, automation, testing and senior delivery capacity.

NMS Monthly Package Allocation

Allowances are planning amounts. Final media and software spend follows approved channel plans and provider tariffs.

Package	Monthly budget	Service delivery	Paid-media allowance	Software/tools allowance	Best fit
Foundation	R20,000	R14,500	R3,000	R2,500	Focused launch foundation, credible digital presence and lead capture
Launch	R35,000	R24,500	R7,500	R3,000	Brand, store and multi-channel content engine going live
Growth	R50,000	R32,500	R14,000	R3,500	Always-on acquisition, SEO, automation and conversion improvement
Scale	R75,000	R45,000	R25,000	R5,000	Higher content velocity, broader media and lifecycle optimisation

Package	Monthly budget	Service delivery	Paid-media allowance	Software/tools allowance	Best fit
Market Leader	R100,000	R57,500	R35,000	R7,500	Outsourced growth office with senior oversight and full-funnel experimentation

4.1 Scope comparison

Workstream	Foundation	Launch	Growth	Scale	Market Leader
Strategy and leadership	Monthly plan and review	Fortnightly sprint	Weekly growth sprint	Weekly cross-channel sprint	Senior growth office and quarterly planning
Brand and logo	Refinement or compact identity	New/refined identity and guide	Identity system and templates	Full toolkit and campaign system	Identity governance and rollout
Website/store	Site and starter store, up to 10 SKUs	Store up to 25 SKUs	Store up to 50 SKUs and landing pages	Advanced store, bundles/subscriptions	Custom commerce roadmap and recurring CRO
Copy	Core website copy	Website plus product/service copy	Conversion copy and two articles/month	Conversion copy and four articles/month	Editorial and thought-leadership programme
SEO	Technical basics and local setup	On-page SEO and keyword map	Monthly technical/content SEO	Content clusters and authority support	Advanced SEO and digital PR support
Social	Two priority channels	Three channels	Four channels	Five channels	All relevant channels with repurposing
Content/month	Eight static or short-form items	Twelve items plus two short videos	Sixteen items plus four short videos	Twenty-four items plus eight short videos	Thirty or more items plus twelve short videos

Workstream	Foundation	Launch	Growth	Scale	Market Leader
Paid media	One platform	Meta/search mix	Multi-campaign acquisition	Multi-channel acquisition	Full-funnel tests and creative portfolio
Chatbot	FAQ bot and forms	AI FAQ and lead qualification	AI bot, CRM capture and human handoff	Multi-channel workflows	Advanced knowledge operations and QA
CRM/lifecycle	Lead inbox and basic email	Pipeline and welcome flow	Segmentation and nurture automation	Lifecycle and WhatsApp workflows	Advanced CRM operations and attribution
Reporting	Monthly scorecard	Dashboard and monthly review	Funnel analysis	Weekly optimisation and monthly board report	Executive dashboard and experiment portfolio
Maintenance	Two change hours/month	Four hours/month	Eight hours/month	Twelve hours/month	Twenty hours/month and senior technical oversight

The scope matrix is a commercial baseline, not an invitation to produce unbounded work. Final quantities, product counts, page counts, languages, integrations, revision rounds, turnaround times and responsibilities will be confirmed in the statement of work.

4.2 Recommended option

The **Growth package for six months** is recommended as the best balance for NMS. A three-month programme can launch the system, but six months allows the team to learn from live customer behaviour, refine the offer, improve creative, develop search content and evaluate early repeat purchase. The five-percent commitment discount applies to the R32,500 service fee only, reducing the recurring total from R50,000 to **R48,375 per month excluding VAT**. The six-month contract value is **R290,250 excluding VAT** and **R333,787.50 including VAT**, before optional add-ons.

If NMS must begin at the minimum, Foundation should be used as a focused validation programme: one priority acquisition path, two social channels, a smaller store, essential content, basic automation and strict change control. If NMS already has inventory, fulfilment, product evidence and a proven offer, Scale may produce faster learning by funding a broader creative and media programme.

5. Commitment options and discounts

South Africa's standard VAT rate is 15%. [14](#) All commercial tables below are exclusive of VAT unless stated otherwise. Discounts apply only to the service-delivery component because media, software, creator costs and external services are not controlled margins.

Commitment	Service-fee discount	Commercial purpose
3 months	0%	Minimum term; foundation, launch and initial measurement
6 months	5%	Build, learn and optimise; recommended starting horizon
9 months	8%	Develop content, CRM and channel maturity
12 months	12%	Best monthly value; supports SEO, retention and seasonality evidence

5.1 Contract values by package

Package	3 months	6 months	9 months	12 months
Foundation	R60,000	R115,650	R169,560	R219,120
Launch	R105,000	R202,650	R297,360	R384,720
Growth	R150,000	R290,250	R426,600	R553,200

Package	3 months	6 months	9 months	12 months
Scale	R225,000	R436,500	R642,600	R835,200
Market Leader	R300,000	R582,750	R858,600	R1,117,200

These totals include the package media and tools allowances for the full term and the applicable service discount. They exclude VAT and optional add-ons. The editable workbook supplied with this proposal calculates the VAT-inclusive cash requirement and month-by-month payment view.

6. Optional add-ons

Add-ons allow NMS to customise a package without moving to the next full tier. Every add-on requires a short written scope and approval. Third-party tariffs and external supplier quotes may change.

Add-on	Billing	Price excl. VAT	Scope note
Additional paid-media allowance	Monthly	R5,000	Media only; management may change at higher spend
Four-post content pack	Monthly	R4,500	Design, caption and scheduling
Four short-form video edits	Monthly	R8,500	Editing from supplied or planned footage; shoot costs separate
Professional photo/video shoot day	Once-off	R18,000	Crew and editing allowance; travel, talent and location excluded
Influencer activation management	Monthly	R7,500	Creator fees, usage rights and products excluded
Two researched SEO articles	Monthly	R7,000	Subject to medical or compliance review
Additional landing page	Once-off	R6,500	Design, copy and build

Add-on	Billing	Price excl. VAT	Scope note
Additional 25 store products	Once-off	R5,500	NMS supplies approved data and imagery
Advanced CRM workflow	Once-off	R9,500	One scoped automation journey
WhatsApp Business integration	Once-off	R12,500	Provider and conversation fees excluded
Custom API/integration sprint	Once-off	R18,000	Final price follows technical discovery
Compliance/legal specialist review	Once-off allowance	R15,000	External specialist; final quote may vary

Major cinematic production, mobile-app development, ERP integration, regulatory submissions, packaging redesign, high-volume catalogue migration and multilingual rollout will be quoted as separate projects.

7. Implementation roadmap: 3 to 12 months

Phase 1 — Foundation and controlled launch: Months 1–3

The first 90 days adapt the useful structure of the client-supplied blueprint but introduce stronger South African compliance and commercial gates. The purpose is to create a production-ready foundation, launch controlled acquisition and establish a reliable baseline.

Month	Delivery focus	Principal outputs	Decision gate
1	Discovery, compliance and architecture	Product/claim register, audience priorities, brand direction, information architecture, measurement plan, access and security setup	No public launch until product status, claims and responsibilities are documented

Month	Delivery focus	Principal outputs	Decision gate
2	Build and production	Brand system, copy, site/store, CRM pipeline, chatbot knowledge base, social setup, initial content and campaign assets	Staging acceptance, mobile and checkout QA, consent and policy review
3	Launch and calibration	Production launch, controlled campaigns, support workflow, analytics validation, first scorecard and backlog	Data quality, payment success, fulfilment and early unit economics acceptable before scaling

Phase 2 — Optimisation and channel fit: Months 4–6

The team improves the conversion journey using real behaviour. Search and Meta campaigns are refined, underperforming creative is replaced, store friction is addressed, organic content expands and email/WhatsApp nurture moves beyond a basic welcome flow. The six-month review compares fulfilled revenue and contribution against the all-in programme cost and recommends whether to hold, narrow, scale or reposition.

Phase 3 — Compounding growth: Months 7–9

Months 7–9 deepen the assets that compound: expert-reviewed SEO content, video education, partner acquisition, reviews, lifecycle automation, replenishment and win-back. The team may add TikTok, YouTube, LinkedIn or creator programmes if policy eligibility and economics support them. The objective is to create more than one functioning acquisition or partnership motion while reducing dependence on a single platform.

Phase 4 — Retention and market leadership: Months 10–12

The final phase evaluates seasonality, customer cohorts, repeat behaviour, content contribution and brand search. It strengthens high-performing segments, retires low-value work and builds the next annual plan. NMS receives a 12-month performance review, asset and access register, prioritised technical backlog, content plan, channel budget recommendation and renewal options.

8. ROI, break-even and growth planning

8.1 How ROI will be measured

The programme will measure **incremental contribution**, not just attributed revenue. Platform return on ad spend can look positive while the overall programme loses money because platform metrics exclude agency fees, software, VAT, returns, fulfilment and cost of goods. NMS reporting will keep the following measures distinct:

Measure	Formula	Management use
Media ROAS	Platform-attributed revenue ÷ media spend	Campaign diagnostic only
Marketing efficiency ratio	Total net revenue ÷ total marketing spend	Blended operating context
Media CAC	Media spend ÷ new customers	Media efficiency
All-in CAC	Total programme cost ÷ incremental new customers	Investment decision
Contribution per customer	Net sales excluding VAT and refunds minus variable costs	Maximum sustainable acquisition cost
Contribution ROI	(Incremental contribution – total programme cost) ÷ total programme cost	Primary programme return measure
Payback period	All-in CAC ÷ monthly contribution per customer	Cash and scaling risk

Shopify cites global e-commerce conversion figures around 1.6% to 2.95% while explicitly warning against universal benchmarks because category, source, device, price and market differ. [25](#) Baymard reports a global documented cart-abandonment average above 70%, but notes that much abandonment reflects browsing rather than a preventable checkout failure. [26](#) These figures may help diagnose the funnel; they are not South African NMS targets.

8.2 Illustrative break-even example

The attached workbook uses editable assumptions. Its default illustration assumes an average transaction value of **R950**, a **55% gross/contribution margin**, **1.4 purchases per acquired customer in year one**, and a **10% qualified-lead-to-sale rate**. These are not NMS facts and must be replaced with verified finance and CRM data.

Under those assumptions, the year-one gross contribution per acquired customer is R731.50. The approximate monthly requirement at the six-month discounted package price is:

Package	Discounted monthly investment excl. VAT	New customers/month to cover programme	Qualified leads/month at 10% close rate
Foundation	R19,275	26.3	263
Launch	R33,775	46.2	462
Growth	R48,375	66.1	661
Scale	R72,750	99.5	995
Market Leader	R97,125	132.8	1,328

The table does not forecast that NMS will achieve these volumes. It tells decision-makers what must be true for the programme to pay back under the selected assumptions. A higher contribution margin, higher repeat rate or higher average order value lowers the required customer volume; lower margins, returns, stock-outs or weaker repeat purchase raise it.

8.3 Provisional growth target corridors

Because no NMS baseline, transaction data or margin file was provided, the following numbers are **planning corridors, not guarantees or market benchmarks**. They will be reset during Month 1 using the prior 90–180 days of verified traffic, lead, order and cohort data. "Qualified traffic" excludes obvious bots, accidental visits and irrelevant locations; "qualified leads" require a defined fit or intent threshold.

Programme and horizon	Provisional qualified-traffic corridor	Provisional qualified-lead corridor	Additional operating outcome
Foundation, 6–12 months	+25% to +60%	+15% to +40%	One validated acquisition path and dependable monthly scorecard
Launch, 6–12 months	+40% to +90%	+25% to +60%	Store, three-channel content engine and early lifecycle flows
Growth, 6–12 months	+60% to +130%	+40% to +90%	One to two contribution-positive campaigns or segments; measurable CRM-assisted sales
Scale, 9–12 months	+90% to +180%	+60% to +130%	Two repeatable acquisition motions and improving customer cohorts
Market Leader, 9–12 months	+120% to +250%	+90% to +180%	Full-funnel experiment portfolio, partner motion and senior growth governance

These corridors assume that NMS has lawful marketable offers, adequate stock, competitive fulfilment, timely approvals, functional sales follow-up and sufficient media. Growth can be lower, flat or negative. The programme is successful only if traffic and leads translate into acceptable delivered-order contribution, customer experience and retention.

8.4 Measurement horizons and decision rules

Timing	Evidence expected	Decision rule
Weeks 1–4	Tracking, consent, payment and support data are trustworthy	Fix measurement and operations before increasing spend
Weeks 5–8	Sufficient traffic and creative response to identify obvious friction	Replace weak messages and pages; avoid declaring winners prematurely
Weeks 9–12	Early first-order economics and lead quality	Scale only campaigns that pass margin, stock and fulfilment gates
Months 4–6	More stable CAC, conversion and early repeat cohorts	Allocate budget to the strongest offer–audience–creative combinations
Months 7–9	Content, lifecycle and partnership contribution	Reduce platform concentration and invest in compounding assets

Timing	Evidence expected	Decision rule
Months 10–12	Seasonality, mature cohorts and incrementality evidence	Approve the annual growth plan based on contribution, not vanity metrics

Controlled experiments will be used where volume permits. Meta and Google provide experiment frameworks, but statistical confidence still depends on sample size and clean design. [29](#)

9. South African compliance and launch gates

SAHPRA provides specific regulatory guidance for complementary medicines and health supplements. Whether a product or service may be sold and how it may be promoted depend on product classification, formulation, dose, intended use, scheduling, licensing, registration or call-up status, labelling and evidence. [15](#) "Natural," "traditional" or "wellness" language does not create an exemption.

POPIA governs personal information, while health information can be special personal information requiring stronger controls. [16](#) The Information Regulator's direct-marketing guidance requires disciplined consent, prospecting and suppression practices. [17](#) ECTA requires online supplier disclosures, review/correction opportunities and, where applicable, cooling-off rights; the Consumer Protection Act adds protections for direct marketing, fair terms, quality and remedies. [18](#) [19](#) PAIA responsibilities and the section 51 manual must also be addressed. [20](#)

Gate	Required control before launch
Product and service status	Register each SKU/service, classification, schedule, licence/registration position, practitioner scope and restrictions
Claims approval	Tie every website, ad, testimonial, chatbot and creator statement to an approved claims library and evidence file
Privacy	Publish section 18 notices; define lawful purposes, retention, operator agreements, access and data-subject workflows

Gate	Required control before launch
Health information	Keep symptom/health data out of advertising audiences; minimise collection; restrict access and obtain specialist advice where needed
Direct marketing	Use separate unticked channel consent; log wording, timestamp and source; enforce suppression and easy opt-out
Cookies and pixels	Use necessary-only defaults and informed preferences for identifiable analytics/advertising; avoid pixels on sensitive journeys
E-commerce terms	Display supplier details, full prices, fulfilment, returns, recurring terms, privacy/security and applicable cooling-off rights
Payments	Use hosted or tokenised checkout, strong access control, webhook verification, fraud controls and applicable PCI DSS validation 21
Platform policy	Check current Google, Meta and TikTok healthcare, pharmaceutical and supplement rules before every campaign 22 23 24
Chatbot safety	Prohibit diagnosis/prescribing; use approved information, confidence triggers, human handoff and emergency escalation

A disclaimer is useful context but cannot neutralise an unlawful or misleading claim. External South African legal counsel, a SAHPRA regulatory specialist and the applicable practitioner council should validate the final implementation.

10. Governance, responsibilities and service management

10.1 Delivery governance

The programme will run through a single backlog and decision log. NMS will appoint one accountable sponsor and one day-to-day decision-maker. The service provider will appoint a programme lead, creative lead and technical owner, adding media, copy, SEO and automation specialists according to package.

Activity	Service provider	NMS
Strategy and recommendations	Responsible	Approves business priorities and risk appetite

Activity	Service provider	NMS
Brand, design and copy	Produces and quality-assures	Supplies facts and approves within agreed turnaround
Product claims and legal status	Uses the approved register	Accountable for truth, evidence and specialist approval
Website and integrations	Designs, builds, tests and maintains	Provides access, products, policies and operational rules
Media and content	Plans, produces and optimises	Approves claims, offers, budget and public representation
Orders, consultations and fulfilment	Supports systems and communication	Owns stock, delivery, refunds and practitioner decisions
Data protection	Implements scoped controls as operator/service provider	Remains accountable responsible party unless agreed otherwise
Reporting	Reconciles and explains performance	Supplies finance/order data and confirms business outcomes

10.2 Working rhythm

Foundation includes one monthly planning and performance review. Launch uses a fortnightly sprint. Growth, Scale and Market Leader use weekly growth sprints with progressively deeper reporting and decision support. All packages receive a monthly report with completed work, results, risks, learnings, next actions, budget position and approvals required.

10.3 Maintenance and support

Package	Routine response target during business hours	Included monthly change capacity	Operational review
Foundation	One business day	2 hours	Monthly
Launch	One business day	4 hours	Monthly
Growth	Within 8 business hours	8 hours	Monthly plus funnel review
Scale	Within 4 business hours	12 hours	Weekly optimisation
Market Leader	Within 2 business hours	20 hours	Weekly plus executive review

The response target confirms acknowledgement and triage, not guaranteed resolution. Critical outages, third-party incidents, security events and complex changes may require separate remediation and vendor coordination. Twenty-four-hour emergency support is not included unless specifically contracted.

11. Commercial terms

- 1 **Proposal validity.** Pricing is valid for 30 calendar days, subject to final discovery and supplier quotations.
- 2 **Minimum term.** The minimum commitment is three months. Longer commitment discounts apply only to service delivery.
- 3 **Payment.** Recurring programme fees are payable monthly in advance. Media and variable software balances must be funded before use. Once-off add-ons are normally 50% on approval and 50% on delivery.
- 4 **VAT.** Prices exclude VAT. VAT will be charged where required at the prevailing rate.
- 5 **Client ownership.** NMS should own its domain, advertising accounts, analytics properties, payment account, CRM data and primary platform accounts. Access will be granted to the delivery team using named users wherever possible.
- 6 **Intellectual property.** Final custom brand and creative assets transfer to NMS after full payment. Third-party software, fonts, stock assets, templates, plug-ins, models and platform components remain subject to their licences.
- 7 **Media and software.** Media, creator fees, usage rights, platform charges, payment-gateway fees, messaging fees, model usage and exchange-rate movements are pass-through costs unless expressly fixed in writing.
- 8 **Approvals.** The timeline assumes one NMS decision-maker and feedback within two business days. Delayed information, claims approval or access can move the launch date.
- 9 **Revisions.** Each deliverable will have defined revision rounds in the statement of work. New direction after approval is a change request.
- 10 **Change control.** Work outside the package or statement of work requires a written estimate, timeline and approval before execution.
- 11 **Renewal and exit.** After the initial term, the programme may renew monthly or under a new commitment. Offboarding includes an access register, approved source files and a current backlog, subject to all invoices being settled.
- 12 **Performance.** The provider commits to professional delivery, transparent reporting and continuous optimisation. It does not guarantee sales, rankings, platform approval, media costs, regulatory approval or positive ROI.

12. Assumptions and exclusions

This proposal assumes that NMS can supply accurate business details, product and service records, lawful claims, price lists, policies, stock and fulfilment rules; that responsible practitioners hold current appropriate registrations; and that NMS will provide access to existing domains, platforms and data. Existing website or database remediation may alter scope after technical review.

Unless expressly included, the programme excludes formal legal opinions, regulatory submissions, clinical evidence creation, laboratory testing, packaging manufacture, stock procurement, courier charges, payment transaction fees, influencer compensation, talent, locations, travel, multilingual translation, native mobile applications, ERP implementation, custom point-of-sale systems and 24/7 support. The add-on table provides allowances for several common expansions.

The selected package's website and integration scope must be technically feasible within its time and budget. If discovery identifies a legacy platform, data migration, security incident or custom integration that would consume the programme's delivery capacity, the parties will choose between simplifying the requirement, replacing another deliverable or approving a separate project.

13. Acceptance criteria

Deliverable	Acceptance standard
Strategy	Audiences, offers, channel roles, scorecard, 90-day backlog and owners approved
Brand system	Approved logo files, colour/typography rules and editable templates delivered
Copy	Core copy linked to approved claims and NMS factual sign-off
Website/store	Mobile, browser, form, checkout/booking, email, analytics, consent and security QA passed
Social/content	Profiles secured; approved calendar and agreed volume published or scheduled
CRM/lifecycle	Test lead/order captured; ownership, status and consent visible; flows tested
Chatbot	Approved knowledge answers, prohibited topics, escalation and human handoff tested

Reporting	Events reconciled to test records; monthly scorecard definitions approved
Maintenance	Backup, restore path, access register, update routine and incident contacts documented
Launch	NMS gives written go-live approval after compliance and operational gates pass

14. Recommended decision

NMS should approve a **six-month Growth programme** subject to a short validation workshop. This option is large enough to implement the complete commercial system without spreading the team across too many channels, while retaining the flexibility to add a shoot, extra media, specialist compliance review or custom integration.

The first workshop should confirm six inputs: the legal entity and brand owner; the product and service catalogue; current SAHPRA and practitioner status; monthly stock and fulfilment capacity; historical traffic, orders, average order value and contribution margin; and the available launch date. The parties can then convert this proposal into a signed statement of work and implementation schedule.

Approval checklist

Decision	NMS selection
Package	Foundation / Launch / Growth / Scale / Market Leader
Initial term	3 / 6 / 9 / 12 months
Preferred launch window	_____
Required add-ons	_____
NMS sponsor	_____
NMS day-to-day approver	_____

Decision	NMS selection
Regulatory/legal reviewer	_____
Approved monthly budget excl. VAT	R_____
